Informazioni sul presente documento

Il presente documento «Peso dei sintomi e misure restrittive della libertà Psichiatria ospedaliera per adulti. Allegato al rapporto comparativo nazionale. Misurazione 2019» contiene grafici e tabelle aggiuntivi con informazioni dettagliate sui risultati della misurazione. Il rapporto principale è disponibile sul [sito web dell'ANQ](#).

Note:

A causa della mancata differenziazione delle sedi delle cliniche 07, 77 e 78, queste sono riportate cumulativamente al numero 07.

Il termine «Tutte» indica valori validi per tutte le cliniche psichiatriche per adulti.

Il termine «Totale» indica i valori totali delle cliniche di un determinato tipo di clinica.

Tabella 8: ricovero a fini assistenziali

1.8 Settore di attività

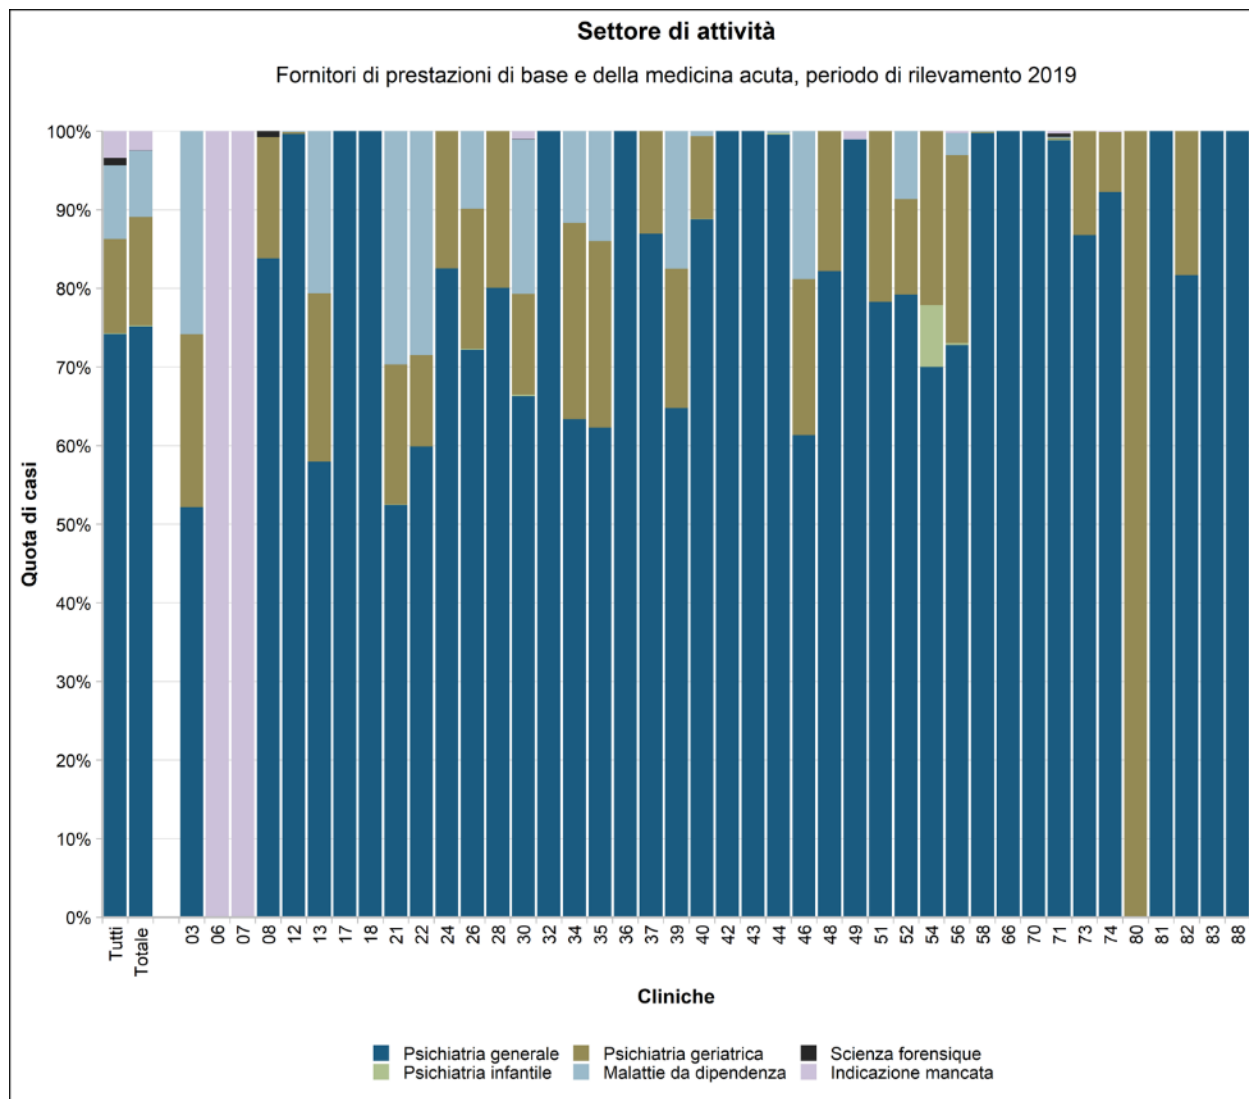

Figura 24: quota di casi per settore di attività nei fornitori di prestazioni di base e della medicina acuta
Manca lo 2.5% delle indicazioni.

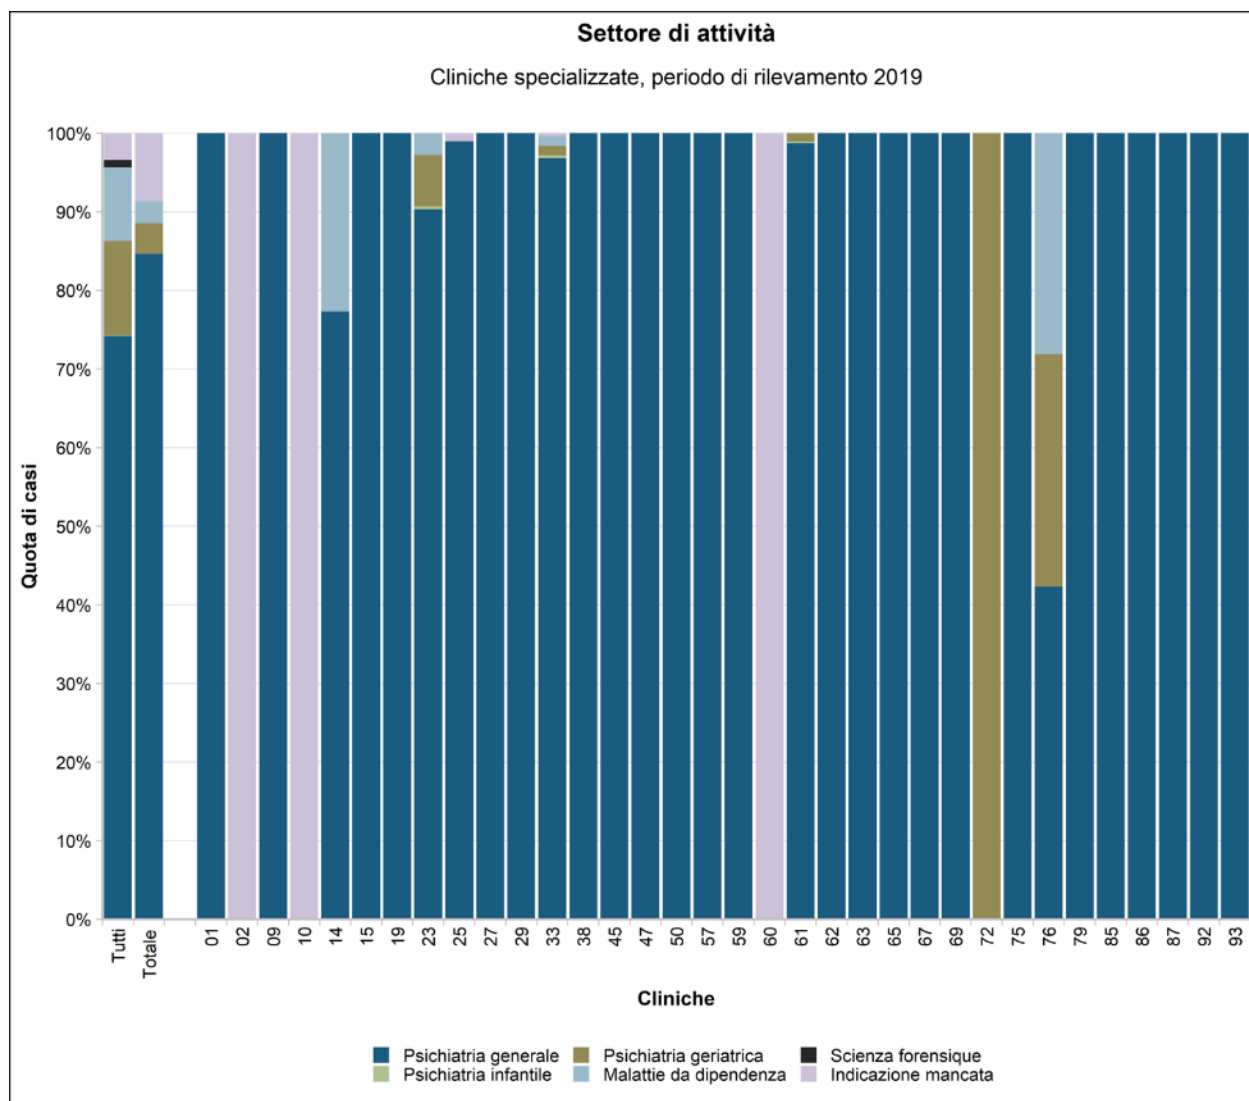

Figura 25: quota di casi per settore di attività nelle cliniche specializzate

Manca lo 9.53% delle indicazioni.

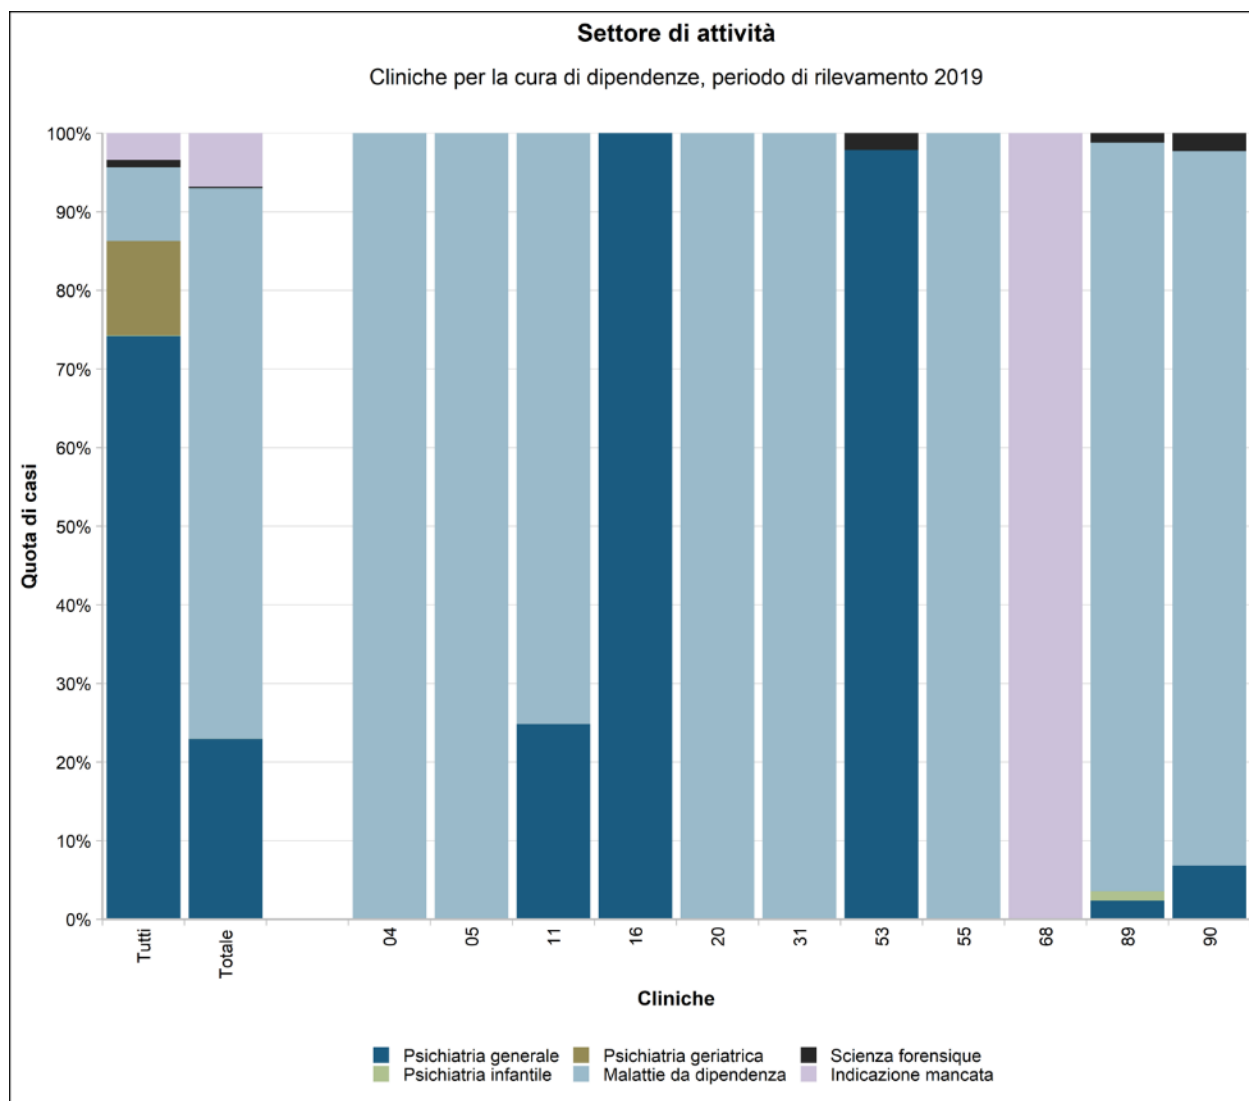

Figura 26: quota di casi per settore di attività nelle cliniche per la cura di dipendenze

Manca lo 7.31% delle indicazioni.

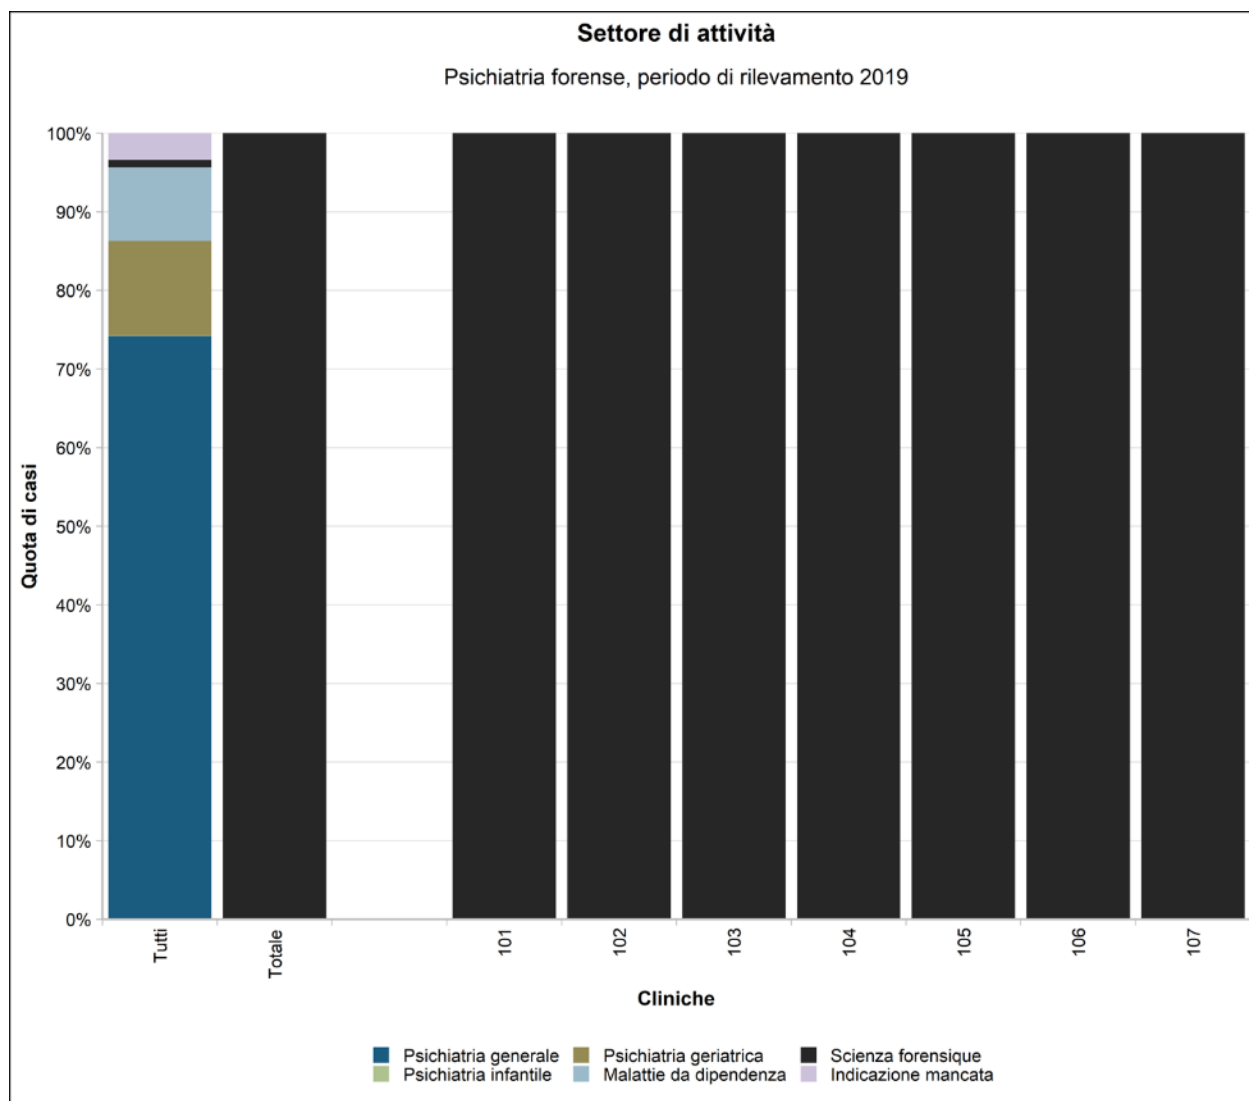

Figura 27: quota di casi per settore di attività nelle cliniche di psichiatria forense

Settore di attività nelle cliniche

Tabella 56: qualità dei dati delle misure restrittive della libertà nel complesso

Osservazioni:

I dati sulle MRL della clinica 75 non erano analizzabili in quanto i FID corrispondenti non coincidevano con i FID nel set di dati MB e non era dunque possibile determinare con certezza se i FID corrispondenti fossero stati dimessi dalla clinica nell'attuale periodo di analisi. Queste cliniche sono state escluse dal calcolo delle percentuali.

Si prega di notare che sono elencate anche le misure restrittive della libertà per cause somatiche.

A7. Ausili alla lettura

Diagramma a colonne cumulate

Questi diagrammi vengono utilizzati per rappresentare la ripartizione della qualità dei dati.

Esempio di lettura:

Per la clinica 27, è stato documentato completamente oltre il 50% dei casi. Un altro 10% circa dei casi non è documentato completamente, ma è comunque analizzabile. Il 35% dei casi erano drop-out non influenzabili dalla clinica. Nel 5% circa dei casi, infine, il set di dati non era presente o non era analizzabile.

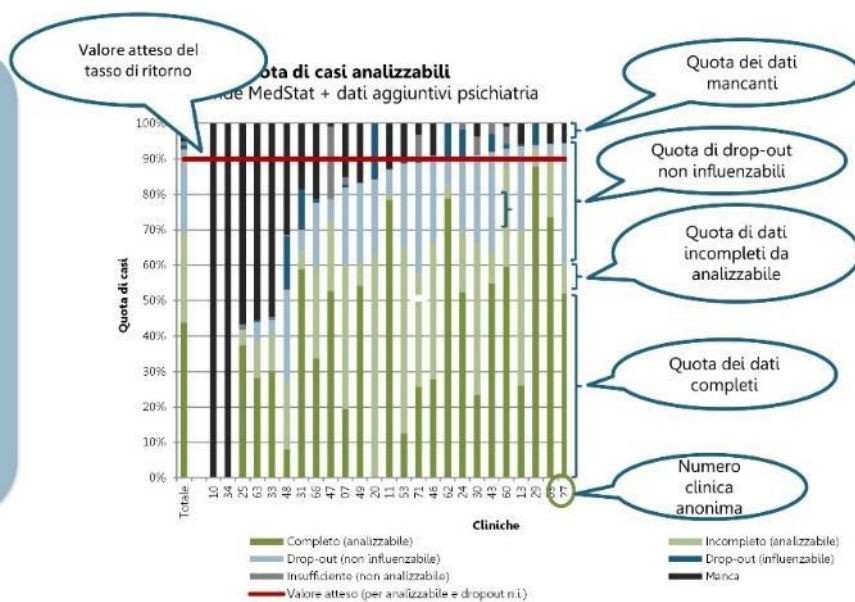

Figura 71: ausilio alla lettura: diagramma a colonne cumulate

Boxplot

Questi diagrammi vengono utilizzati per rappresentare la ripartizione della gravità (HoNOS e BSCL) al momento dell'ammissione.

Esempio di lettura:

La clinica 20 presenta una gravità media al momento dell'ammissione (HoNOS) di 12 (mediana). Ciò significa che il 50% dei casi è di gravità inferiore e il 50% di gravità superiore. Il 25% dei casi presenta una gravità all'ammissione fino a 7 (percentile 25%), il 25% una gravità all'ammissione di almeno 16 (percentile 75%).
